

# Scavenger Hunt: How Does it Feel?

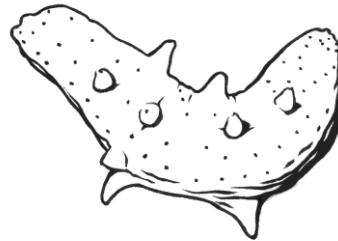

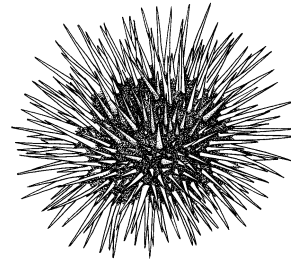

Echinoderms, like sea stars, sea urchins, and sea cucumbers are described as spiny skinned animals because of the spines found covering their body. However, some of these animals just feel rough, some very spiky, and some like the sea cucumber, actually feel very squishy!

Animals in the ocean come in all shapes, sizes and textures. Let's go on a scavenger hunt around your space and use our sense of touch to find objects that feel different.

Can you find something in your space that feels...

- Bumpy
- Soft
- Squishy
- Slimy
- Hard
- Fuzzy
